

Iran Hack Security TM

Short Description of **Ports**

شرح مختصری بر مباحث پورت ها

Authors:

پورت چیست؟

پورت در لغت به معنی بندر، درگاه، درب و... میباشد. پورت محلی است که داده ها خارج یا وارد میشوند و برای تبادل اطلاعات بین دو کامپیوتر مورد استفاده قرار میگیرد. در مباحث هک و امنیت، معمولا از پورت های نرم افزاری استفاده میشود که به هر کدام عدد خاصی نسبت می دهیم. این اعداد معمولا یک عدد 16 بیتی هستند. پورت ها برای ارسال بسته ی اطلاعاتی (packet) در اینترنت یا شبکه ها به کار می رود.

زمانی که می گوئیم یک پورت باز است، یعنی برنامه ای روی آن کامپیوتر نصب شده و شماره پورت مربوطه را باز کرده است. به عبارت دیگر برنامه مذکور در پشت آن پورت به صورت فال گوش منتظر دریافت اطلاعات است. **پورت ها به خودی خود باز نمی شوند.** یک سری از پورتها توسط خود سیستم عامل باز می شوند، یعنی به محض نصب سیستم عامل (که خود نیز یک نرم افزار محسوب می شود) تعدادی از پورت ها توسط برنامه های موجود در سیستم عامل باز و به صورت فال گوش در می آیند. اینگونه پورت ها به **پورت های پیشفرض باز سیستم عامل** مشهورند. مانند پورت های 135 و 445 در سیستم عامل Windows XP، در مقابل بعضی دیگر از پورت ها توسط برنامه های چاقی باز می شوند. به عنوان مثال وقتی می گوئیم پورت 25 روی یک سیستم یا IP باز است، بدین معنی است که برنامه ای روی آن کامپیوتر خاص وجود دارد که پورت 25 را باز کرده و هنگامی که از طریق کامپیوتری دیگر با آن پورت کار می کنیم، در واقع داریم با آن برنامه خاص (که آن پورت را باز کرده) صحبت می کنیم.

فهرست سرویس دهنده های استاندارد و شماره پورت های آنها توسط IETF (Internet Engineering Task Force) در RFC 1700 مشخص شده است.

سرویس های سیستم با گوش دادن به پورت ها قادر به تشخیص ترافیک ورودی شبکه هستند.

--> سوالی که ممکن است در این رابطه مطرح شود این است که:

به طور کلی چرا یک نرم افزار باید پورتی را باز کند و دیگر آنکه کدام نرم افزارها باید پورت را باز کنند؟

پاسخ به این سوال اینگونه است که در حالت کلی هر برنامه ای که بخواهد از طریق شبکه (از راه دور یا Remote) قابل دسترس باشد، باید یک پورت را باز کند. پس در حقیقت، برنامه ای که نیازی به برقراری ارتباط شبکه ای ندارد، (به طور مثال یک نرم افزار گرافیکی) نباید پورتی را روی سیستم مذکور باز کند. نرم افزارها و برنامه هایی هستند که از طریق آنها می توان با پورت ها صحبت کرد که معروفترین و قدرتمندترین آنها برنامه های Telnet و Netcat (که به اختصار به آن NC گفته می شود) می باشند. در مورد این برنامه ها و نحوه صحبت با پورت ها توسط این برنامه ها در مقالات بعدی به طور مفصل بحث خواهیم کرد.

متداول ترین پورت های شبکه در ویندوز

ویندوز از یک زیر ساخت جامع و پیوسته به منظور تامین طیف وسیعی از نیازها و خواسته های پیاده کنندگان و کارشناسان حرفه ای فناوری اطلاعات، استفاده می کنند. در زیر ساخت فوق، برنامه های متعددی اجرا می شود تا استفاده کنندگان اطلاعات، به سادگی و با سرعت بالا، قادر به دستیابی، آنالیز و اشتراک اطلاعات باشند.

محصولات سرویس دهنده شرکت مایکروسافت از تعداد زیادی پورت و پروتکل شبکه ای به منظور ارتباط بین سیستم های سرویس دهنده و سرویس گیرنده استفاده می کنند. در صورتی که به منظور ایمن سازی یک شبکه کامپیوتری از دیوارهای آتش خاص یا فیلترهای IPsec استفاده می شود، ممکن است برخی از پورت ها و پروتکل ها توسط برنامه های فوق مسدود و به دنبال آن امکان پاسخگویی یک سرویس دهنده به درخواست های سرویس گیرندگان مجاز، وجود نخواهد داشت.

تقسیم بندی پورت ها از روی شماره ی ان ها

۱- پورت های 0 تا 1024

این پورت ها از مشهور ترین پورت ها هستند و معمولاً هر کدام برای یک سرویس خاص استفاده میشوند.

لیست قسمتی از این پورت ها در زیر آورده شده است:

کلمه مخفف برای پورت مورد نظر	شماره پورت نوع پروتکل	شرح و توضیحات درباره پورت
Keyword	Desimal	Keterangan (#Referensi)
-----	-----	-----
	0/tcp	Reserved
	0/udp	Reserved

۲- پورت های 1024 تا 49151

این پورت ها مشخصا با هیچ یک از سرویس های اینترنتی مرتبط نیستند بلکه وقتی که با یک ابزار شبکه مانند نرم افزار ارسال و دریافت ایمیل، مرورگر های اینترنت و... کار میکنید یکی از این پورت ها به صورت راندوم (random) باز شده و یک ارتباط با سرور برقرار شده و داده ها ارسال و دریافت میشوند. یعنی پورت شما یکی از پورت های این قسمت است و پورت سرور یکی از پورت های بالایی است. این سری پورت ها را پورت های register شده هم میگویند.

لیست این پورت ها نیز در زیر موجود است:

Keyword	Desimal	Keterangan (#Referensi)
-----	-----	-----
	1024/tcp	Reserved
	1024/udp	Reserved
#		IANA
blackjack	1025/tcp	network blackjack
blackjack	1025/udp	network blackjack
#		Unknown contact
#	1026-1029	Unassigned
iad1	1030/tcp	BBN IAD

```

iad1          1030/udp    BBN IAD
iad2          1031/tcp    BBN IAD
iad2          1031/udp    BBN IAD
iad3          1032/tcp    BBN IAD
iad3          1032/udp    BBN IAD

۳- پورت های 49152 تا 65535

این پورت ها به ندرت استفاده میشوند و کاربرد اساسی ان ها برای یک سری سرویس های خاص اینترنتی است و یا توسط Trojan ها است. البته خیلی از تروجان های معروف از پورت های قسمت دوم هم استفاده میکنند و این تقسیم بندی ها همیشه برقرار نیست و به همین علت است که گاهی پورت ها را به دو دسته ی زیر 1024 و بالای 1024 تقسیم بندی میکنند. لیست پورت های مورد استفاده توسط تروجان ها هم در آخر مقاله آورده شده است.

پورت های آسیب پذیر

در دهه های اخیر، سیستم عامل ها حضورشان را در تمامی عرصه های پردازش اطلاعات قطعی کرده اند. سیستم عامل، یکی از عناصر چهارگانه در یک سیستم کامپیوتری است که دارای نقشی حیاتی و تعیین کننده در رابطه با طرز مدیریت منابع نرم افزاری و سخت افزاری است. پرداختن به مقوله امنیت سیستم عامل ها، همواره از مباحث مهم در رابطه با ایمن سازی اطلاعات در یک سیستم کامپیوتری بوده که امروزه با گسترش شبکه اینترنت اهمیت آن مضاعف و دو چندان شده است.

اکثر کرم های رایانه ای و سایر حملات موفقیت آیز در اینترنت، به دلیل وجود نقاط آسیب پذیر در تعداد اندکی از سرویس های سیستم عامل است. هکرها با روشها و تکنیک های خاصی برای سوء استفاده از نقاط ضعف امنیتی شناخته شده، استفاده کرده و در این راستا ابزار های متنوع و موثری را برای نیل به اهداف خود، به خدمت می گیرند.

شناسایی متداول ترین پورت هایی که تاکنون هکرها با استفاده از آنها حملات خود را سازماندهی کرده اند، امری لازم و ضروری به نظر می رسد. برخی از این پورت ها به دفعات و به طور متناوب توسط هکرها و به منظور انجام یک نفوذ و تهاجم مورد استفاده قرار گرفته اند. با بلاک کردن این گونه پورت ها، حداقل امکانات لازم به منظور ایجاد یک محیط ایمن ایجاد خواهد شد. **بهترین روشی که در مورد بلاک کردن پورت ها توصیه می شود، بلاک کردن**

تمامی پورت ها (غیر فعال کردن تمامی ترافیک) و صدور یک مجوز جداگانه برای هریک از پروتکل های مورد نیاز در هر سازمان و با توجه به شرایط موجود است. حتی در صورتی که تمامی پورت ها بلاک شده باشد، باید به طور مستمر آنها را به منظور تشخیص مزاحمت ها و سوء استفاده های احتمالی مانیتور کرده تا در صورت بروز مشکلات احتمالی، سریعاً نسبت به رفع آنها اقدام شود.

به یاد داشته باشید که پورت های زیر را باید روی تمامی کامپیوترهای میزبان با لحاظ کردن مسائل امنیتی پیکربندی کرد. غیر فعال کردن پورت های زیر خلا طراحی سیاست امنیتی را پر نخواهد کرد و باید در این مورد تابع یک سیستم و سیاست امنیتی مناسب باشیم. در زیر متداول ترین پورت های آسیب پذیر را که تاکنون توسط هکرها به کار گرفته شده است آورده شده است:

الگوی پورت ها و جزئیات آنها به صورت زیر است:
